

Please use CSS style instead of skinparam padding

Dashed = no database-enforced foreign key.
Not cosmetic. Because achievements.badge_name is only conventionally tied to badge_definitions.key, awardBadge() calls **silently no-op** today.
A missing constraint became silently dropped writes.

Excluded, and why — four dead tables:

- slide_chunks — 384-dim FastEmbed era, zero writers
- tutor_messages — zero references outside generated types
- concept_mastery — read but never written; permanently empty
- catalog_course_links — only reference is generated types

Also excluded: caches, admin/eval tables, the academic catalog and social graph (separate sub-diagrams), and slides.embedding — which exists in production with ****no** migration defining it**, 100% NULL across 5,445 rows.

No quizzes table exists. A quiz is the set of quiz_questions reachable via slides.lecture_id.
