

Actors and goals (as implemented)

Please use CSS style instead of skinparam padding

Shaded use cases are unreachable in a default deployment.
Every feature flag in the project defaults to off, so the review queue, mock exams and student uploads ship dark. See F17.

Authoring is gated on ownership, not role. `require_creator`` admits both professor and student (`authmiddleware.py:243`) — the comment states the intent: "ownership (not role) is what RLS and endpoint checks gate on." Consequence: a student-uploaded PDF can reach another student's tutor context, which is why retrieved text is treated as untrusted. See F14.

Professors reach "Read lecture" and the tutor by URL only — their navigation chrome has no entry for either (`ConsoleTopBar.tsx:36-42`).
